

Aplicatie grafica in C++

Aplicatia deschide un form pe care sunt plasate 6 butoane : Start,Stop,Te ajut?,INV,back,CHANGE COLORS.

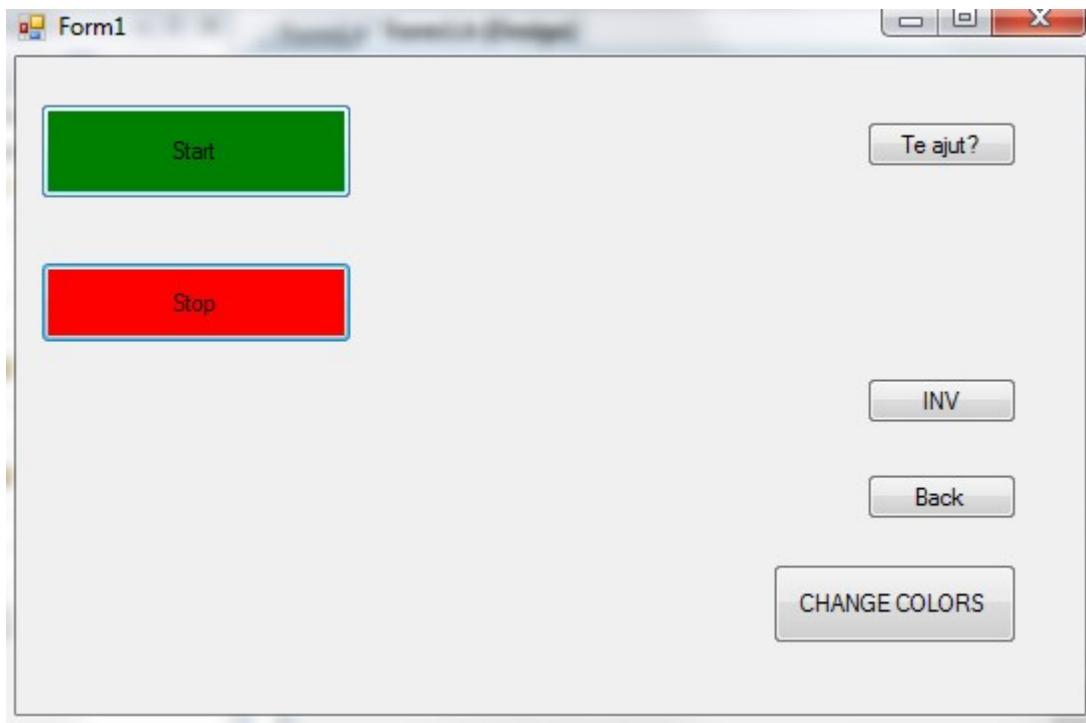

1.Pe evenimentul Start culoarea butonului se va face verde

```
private: System::Void button1_Click(System::Object^    sender,
System::EventArgs^   e) {
    this->button1->BackColor = System::Drawing::Color::Green;
}
```

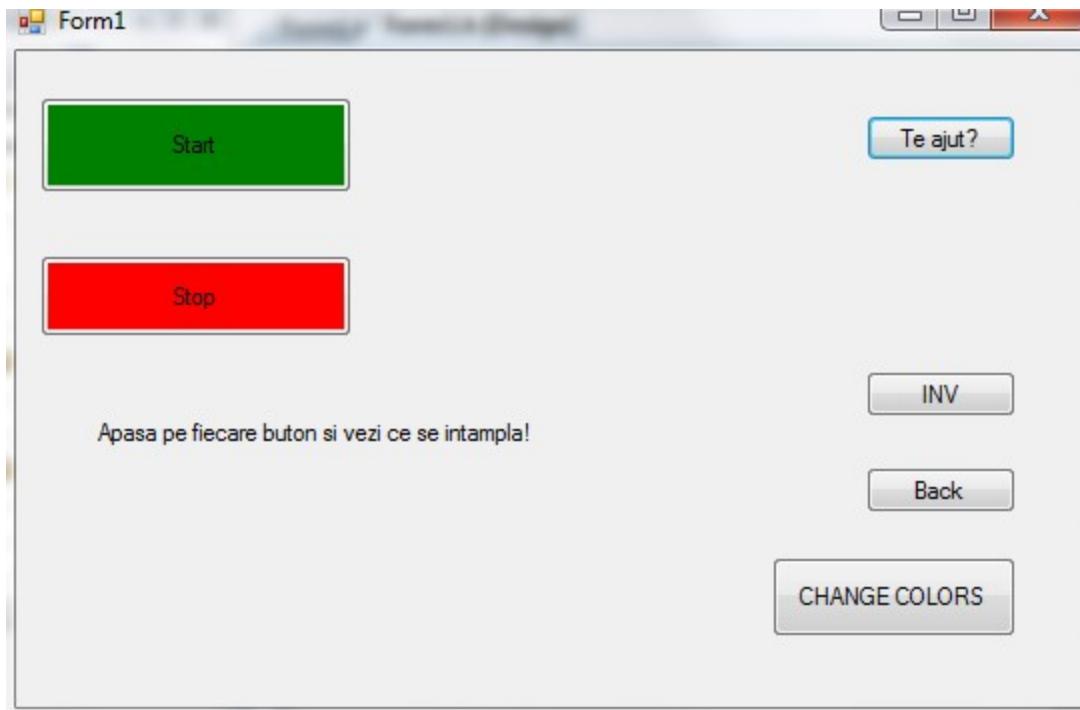

2 .Pe evenimentul Stop culoarea butonului se va face rosie

```
private: System::Void button2_Click(System::Object^    sender,
System::EventArgs^   e) {
    this->button2->BackColor = System::Drawing::Color::Red;
}
```

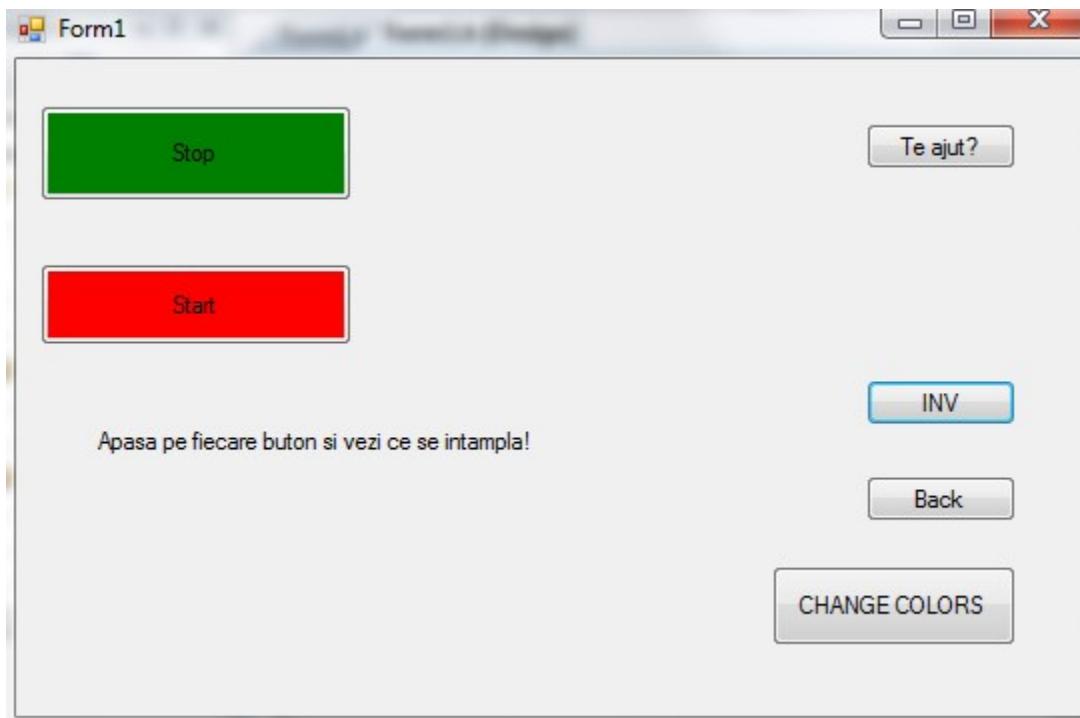

3 .Pe evenimentul “Te ajut?” va aparea un text intr-un label in care scrie:” Apasa pe fiecare buton si vezi ce se intampla!”

```
private: System::Void button5_Click(System::Object^    sender,
System::EventArgs^   e) {
    this->label1->Text="Apasa pe fiecare buton si vezi ce se
intampla!";
}
```

4 .Pe evenimentul INV butoanele Start si Stop se vor invresa

```
private: System::Void button3_Click(System::Object^    sender,  
System::EventArgs^   e)  {  
    this->button1->Text="Stop";  
    this->button2->Text="Start";  
}
```

5 .Pe evenimentul Back butoanele Sopt si Start se vor inversa la loc

```
private: System::Void button4_MouseCaptureChanged(System::Object^    sender,
System::EventArgs^   e) {
    this->button1->Text="Start";
    this->button2->Text="Stop";
}
```

6 .Pe evenimentul CHANGE COLORS butoanele Start si Stop se vor colora intr-o nuanta de gri

```
private: System::Void button6_Click_1(System::Object^    sender,
System::EventArgs^   e) {
    this->button2->BackColor =
System::Drawing::Color::SlateGray;
    this->button1->BackColor =
System::Drawing::Color::SlateGray;
}
```
